

Taking Care of the Food Cravings!

Dial Eats is an online food delivery app and a multi-restaurant aggregator that connects several customers with the restaurants for instant food delivery. The brand features three apps - Customer App, Delivery-Partner App, and Owner App.

Client's Vision

Empowered the client's vision with the right business solution.

The client was quite clear about his business vision. He wanted a food delivery app that helps in connecting the customers directly with the restaurants. To empower his vision, we created a separate app for customers, delivery partners, and owners. All the apps featured rich features and functionalities that ease the process of food delivery for all.

How Softuvo Helped In Achieving Client Goals?

Planning

Keeping in mind the client's requirements, we formulated an action plan that covered all the details. From assigning the tasks to the team members to keeping a regular check on the work's progress, the team left no stone unturned to achieve the client's vision.

Design

The client wanted a simple user interface for the apps. Our bonafide team of designers incorporated the best tools and ideas to create a seamless design that enhances the overall user experience. The app turned out to be interactive and easily navigable.

How Softuvo Helped In Achieving Client Goals?

Development

It was a crucial step, however, the strong agility helped the team to develop amazing apps. After analyzing the client's requirements, we created three apps that were - customer app, delivery-partner app, and the owner's apps. With the core being PHP and Flutter, the apps were successfully made for both iOS and Android platforms.

Testing

No app lands in the Play Stores and App Stores until they go through a rigorous testing process. Our dedicated team of testers follows the right blend of techniques and tools to perform testing. After the evaluation, the apps have marked a success for the launch.

Key Challenges We Faced

No project comes free of challenges! New things welcome new challenges and there were quite a few in Dial Eats as well.

Manage Restaurants

Dial Eats features a collaboration with multiple restaurants at a specific location. Every restaurant has different food menus and availabilities. The team had to work on the server system as well as the functionalities of the app to ensure that the right food is delivered to the customers at the right time.

Tight Schedule

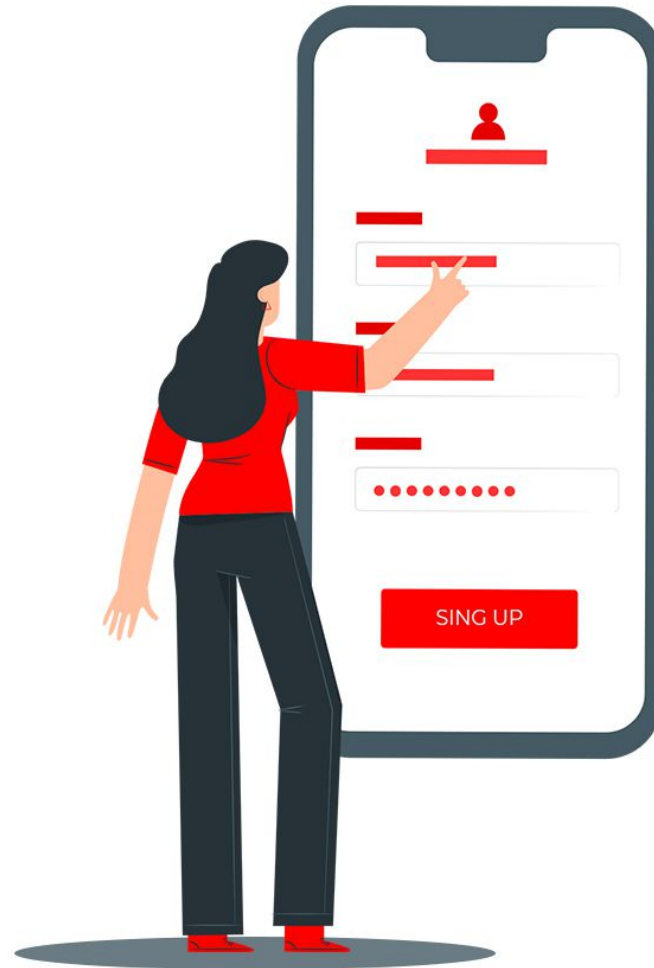

The client was expecting the work fast, so the team had to work under strict time schedules to ensure timely deliveries. The regular scrum meetings helped us achieve the targets right on time and help us serve our clients with satisfactory results.

Challenges will come and go, but the client relationship is here to stay!
Softuvo overcame all the challenges and provided him with seamless services throughout.

The Result

We fulfilled our client's dream with flying colors

The main aim of Dial Eats is to provide seamless online food delivery services. With our innovative ideas and the right mix of technologies, we helped in fulfilling the client's objectives and developed robust app solutions.

Our Final Product

Softuvo is your masterstroke for business success.

Customer App

Delivery-Agent App

Owner App
